Connecting to a Cognos package in Tableau with the Senturus Analytics Connector

1. **Add an ODBC datasource**

2. **Choose Driver and select Senturus Analytics Connector from the dropdown. Then click connect.**
3. Select your Cognos package and click ok

a. Choose Cognos to connect to the production Cognos server.
b. The namespace is always ADS
c. Username is your Netid
d. Password is your Netid password
e. Database is the Cognos package you wish to connect to.
4. Click Sign in.
5. Add tables like you normally would in tableau.

If you are familiar with query studio, Schema equates to a namespace and Table is each query subject.
