Subject: [UNITS:5542] NUIT announces availability of Symantec AntiVirus Corporate Edition 10.0.1

To all UNITS members:

This is to inform you that NUIT will begin official support of Symantec AntiVirus Corporate Edition (SAVCE) 10.0.1 on Wednesday, September 7, 2005.

This software has been tested by NUIT and was distributed to UNITS for testing last week. Features supported by this release include spyware detection and removal. You can find additional information at http://www.it.northwestern.edu/transitions/2005/sav_1001.html.

Please note that this version of SAVCE, as distributed last week, corrects a problem with an earlier version (10.0.0) in which a startup scan consumed excessive resources. Symantec released 10.0.1 to correct this resource problem.

This software can be obtained on September 7 from the NUIT software site at <http://www.it.northwestern.edu/software/staff/free/index.html>. If you have any questions regarding the software download, please contact Christopher Johnson of NUIT at 847-491-4109 or c-johnson@northwestern.edu.

Additional information about installing this release in a Managed SAV environment will be distributed in a separate e-mail communication to the UNITS list.
