**Where appropriate, please contact your local technical support person before taking action from this message.**

IMPORTANT NOTICE: University records indicate that you will NOT be able to access your e-mail after January 11, 2005 unless you follow the instructions below.

In order to keep NetID passwords more secure, Northwestern University Information Technology (NUIT) is phasing out its existing password technology on NU's central e-mail servers (casbah, hecky, lulu, and merle) in favor of newer technology (SSL).

Please upgrade or reconfigure your e-mail software *as soon as possible* using the following instructions.

EUDORA USERS: Find instructions at <http://www.it.northwestern.edu/accounts/email/config/ssl/eudora/>

Note: For SSL to run correctly, you need Eudora 5.2 or above on Windows 2000/XP, or Eudora 6.0 on Macintosh OS 10.2 or above.

OUTLOOK OR ENTOURAGE USERS: Find instructions at <http://www.it.northwestern.edu/accounts/email/config/ssl/outlook/>

APPLE MAIL USERS: Find instructions at <http://www.it.northwestern.edu/accounts/email/config/ssl/applemail/>

WEBMAIL USERS: If you use WebMail for ALL your e-mail, no changes are needed.

After January 11, 2005, users who have not reconfigured their e-mail will be unable to access their Northwestern e-mail accounts. For more information, see "SSL implemented on main e-mail servers" <http://www.it.northwestern.edu/transitions/2003/ssl-lite.html>.

If you have questions, please contact your local technical support person, call the NUIT Support Center at 847-491-HELP (4357), or e-mail consultant@northwestern.edu.
