To whom it may concern:

The software CD distributed by NUIT will be changing for fiscal year 2004. Previous versions included a number of software applications used by the NU community. However, our customers have indicated that the primary tools utilized on this CD were Symantec Anti-virus software and Eudora/Kerberos e-mail software. Thus, we will be distributing the "Anti-Virus/e-mail Software CD," which will include only these programs.

Both programs will work on all operating systems supported by the NUIT Information Center and will operate in a similar manner to last year's CD.

Users will have a choice of installing the software directly from the CD or downloading the latest version from NUIT's software repository, provided they have high speed Internet access. User documentation will also be included in HTML format.

Additional communication surrounding the new CD, including press releases and ads in the Daily Northwestern, will occur in the next two months. Please contact Wendy Woodward (wwk@northwestern.edu, 7-7851) for additional information.
